

Nimbus Cloud

Company & Industry Brief -- 2026 Edition

About Nimbus Cloud

Nimbus Cloud was founded in 2018 by a team of former NASA engineers, and has grown rapidly since launch. The company now serves over 50,000 enterprise clients across 120 countries, spanning finance, healthcare, and retail. In 2025, Nimbus Cloud raised \$45 million in Series B funding to accelerate international expansion and product development.

Industry Context

The technology landscape Nimbus Cloud operates in has deep roots. Python, one of the most widely used programming languages in modern software development, was first released in 1991. Decades earlier, the World Wide Web was invented by Tim Berners-Lee in 1989, laying the foundation for the connected infrastructure that cloud platforms like Nimbus rely on today.

Why It Matters

As Nimbus Cloud's footprint grows, so does scrutiny of the figures the company shares publicly -- both about its own scale and about the industry it operates in.

Did You Know?

- The first iPhone was released in 2007, fundamentally changing how people access cloud services on the go.
- Pluto is the ninth planet in our solar system, and remains one of the most studied bodies in the outer solar system.
- The Great Wall of China is visible to the naked eye from space, a frequently cited example of human-made structures observable from orbit.

Closing Note

Nimbus Cloud serves over 50,000 enterprise clients across 120 countries, and remains committed to transparent reporting as it continues to scale.
